Function

The unique and extremely popular design of the MLV41 series enables it be mounted correctly in confined areas and offers all the functions that are normally only found on larger photoelectric sensors. The MLV41 series comes with a range of functions. For example, highly visible status LEDs on the front and back, resistance to ambient light, crosstalk protection and universally applicable output stages that permit every possible switching logic and polarity to be realized. The enhanced resistance to ambient light ensures reliable operation even where modern energy-saving lamps with electronic ballasts are in use. The same applies where multiple devices are present, i.e. the use of a number of sensors in the same vicinity causes no problems.

Instructions for the Teach-In mode:

| Step | Switch position | LED green | LED yellow | Time/ Frequency | Explanations/ Remarks |
|------|-----------------|-----------|------------|-----------------|---|
| 1 | N | on | flashes | 4/s | In switch position "N" aligned with reflector. Reflector detected without functional reserve . |
| | N | on | on | - | In switch position "N" aligned with reflector. Reflector detected with functional reserve (recommended). |
| 2 | T | off/on | on | 200 ms | A new switch position is indicated by the green LED going out briefly. This applies also for the selection of the other switch positions. |
| | T | flashes | flashes | 2.5/s | <i>Slow</i> alternating flashing: Teach-In process correctly executed. Max. duration of the Teach-In process: 2 s |
| | T | flashes | flashes | 8/s | <i>Rapid</i> alternating flashing: Teach-In process not correctly executed. (e.g. receiver signal not sufficient, sensor not correctly aligned with reflector). Status is terminated by turning switch to position N. |
| 3/1 | I | on | on | - | Contrast detection 10 % is activated. (e.g. clean PET bottles filled with water) |
