

Pressure Transmitter

LHCS-51

- Device for hydrostatic pressure measurement in liquids or paste-like media
- Rope version
- Modular probe program to ensure optimum process adaptation
- Temperature range up to 85 °C (185 °F)
- Pressure range up to 10 bar (150 psi)
- Easy commissioning without the need for an operating tool
- Configurable by PACTware

Function

The device is used for level and pressure measurement in liquids or paste-like media. The device has a hermetically sealed hydrostatic measuring cell. Due to its weight, a liquid column creates hydrostatic pressure. This pressure is measured by the hydrostatic measuring cell. The hydrostatic measuring cell works on the principle of the gauge pressure sensor. Thanks to the hermetic sealing of the measuring element, the hydrostatic measuring cell is absolutely insensitive to condensate/condensation and aggressive gases. The pressure applied is transferred from the process isolating diaphragm to the measuring element by means of an oil without any loss in pressure. The data is transmitted to the control via analog signal, HART protocol or PROFIBUS PA. The device is easily configured by the use of keypad or with the PACTware configuration software. The device is designed modular and offers a variety of process connections, a replaceable display and a universal electronics.

Connection

- 1 External grounding terminal
- 2 Internal grounding terminal
- 3 Supply voltage
- 4 4 mA to 20 mA for HART devices
- 5 For HART devices: With a handheld terminal, all the parameters can be configured anywhere along the bus line via menu operation.
- 6 Terminals
- 7 Test terminals for HART devices
