- Intelligent exposure time control
- Laser class 1, eyesafe
- Data Matrix control codes for parameterization

Laser light sensor for field monitoring; Resolution: 752 x 480 pixel; Measuring range: X = 40 ... 310 mm, Z = 60 ... 700 mm; Scan rate: 30 s-1; 2 digital outputs; RS-485 interface

Function

The SmartRunner Detector performs high-precision area monitoring and switches as soon as the smallest objects enter the field of detection. The detector is based on innovative SmartRunner technology and combines the light section method for detecting height profiles with a 2-D vision sensor. The light section method involves projecting a laser line onto an object. This laser line is then detected by a camera at a specific angle. A height profile is then created using the triangulation principle. This innovative laser technology provides reliable measurements on different surfaces.
