## HiC2853R4

- 1-channel isolated barrier
- 24 V DC supply (bus powered)
- Input for approved dry contacts or SN/S1N sensors
- Usable as signal splitter (1 input and 2 outputs)
- Application-specific outputs
- Active voltage output
- Passive transistor output (resistive)
- Line fault detection (LFD)
- Line fault transparency (LFT)
- Up to SIL 3 acc. to IEC/EN 61508

### Function

This isolated barrier is used for intrinsic safety applications. The device transfers digital signals (SN/S1N proximity sensors or approved dry contacts) from the explosion-hazardous area to the non-explosion-hazardous area. The input controls one active voltage output and one passive transistor output with a resistive output characteristic. The passive transistor output has three defined states: 1-signal = 472 Ω, 0-signal = 1385 Ω and fault > 100 kΩ. This output characteristic offers line fault transparency on the signal lines. During a fault state, both outputs switch to their fault state and LEDs indicate the fault according to NAMUR NE 44. A separate fault bus is available. This fault bus can be monitored if the termination board supports a module fault detection. Unlike a SN/S1N series safety sensor, an approved dry contact requires a 10 kΩ resistor to be placed across the contact in addition to a 1.5 kΩ resistor in series. This device mounts on a HiC termination board.

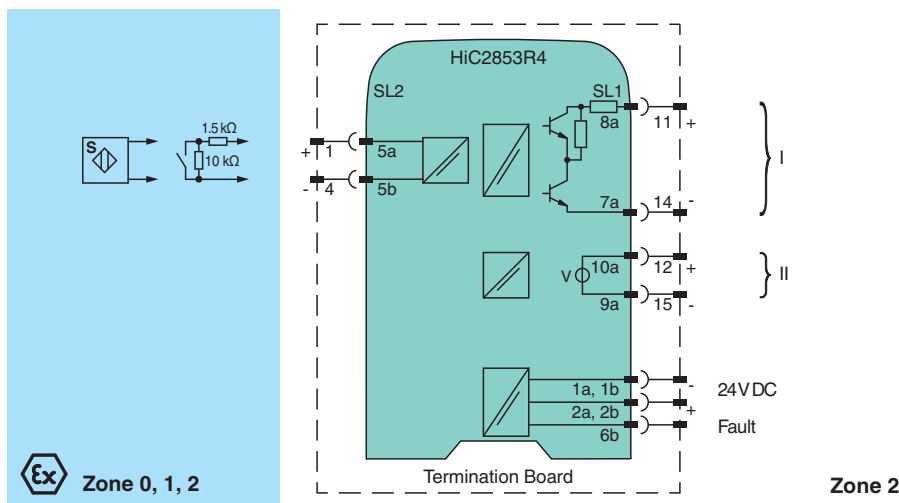

### Application

This device is compatible to the control:

- Schneider Electric Tricon-CX 3902(A)X

Compatibility check to other ESD/ DCS systems on request.
