## NAN4-8GM30-E2-IO-V3

- Parameterization and diagnosis via IO-Link
- Measuring range 0 ... 4 mm
- Non-flush mountable
- Flexible use with versatile mounting opportunities
- Extensive maintenance functions for condition monitoring
- Determining of speed and acceleration of the damping element

Inductive distance sensor with IO-Link interface

### Function

The inductive distance sensors with IO-Link offer a wide range of functions. In addition to continuous distance measurement, 2 switch points or windows can be parameterized in different operating modes. The additional determination of the speed and acceleration of the damping element also allows monitoring options for special braking and acceleration processes or for opening and closing processes. Adjustable filters allow the measurement speed and accuracy to be adapted to the application requirements. All this comprehensive additional data and parameterizable limit values enable perfect condition monitoring of the application/machine, for example for temperature, operating times, counters and also symptoms of wear. Process and service data can be transferred via IO-Link, enabling easy integration into Industry 4.0 applications.
