

## Control Center License Key VISUNET-RM-SHELL6-CC

- Enables easy, centralized management of a Remote Monitor via the VisuNet Control Center

VisuNet Control Center License Key for RM Shell 6

### Function

Pepperl+Fuchs VisuNet Remote Monitors (VisuNet RMs) are industrial- grade thin client solutions that give users a simplified, modern user interface. The firmware of a VisuNet RM, called VisuNet RM Shell, enables users to easily access applications that run on process control systems via Ethernet.

With the CC license key, the "VisuNet Control Center interface" feature can be enabled in the RM Shell 6.x (or newer). This interface enables an RM to be centrally managed via the VisuNet Control Center. This allows functions such as downloading/uploading profiles, changing device settings, and session shadowing.
