

Thin Client Firmware VisuNet RM Shell 6

- Innovative firmware to support easy integration and management of remote monitors and thin clients
- Supports installation of third-party applications, like Citrix Receiver and Embedded Webrowsers
- Microsoft Unified Write Filter, firewall, USB lock-down, and virus scanner support for maximum system security
- Based on Microsoft® Windows 10 IoT Enterprise LTSC 2021
- Auto connect to host systems after RM startup
- Connection loss detection and backup connections for highest reliability
- Simultaneous start of multiple remote connections

Thin Client Firmware for VisuNet Remote Monitors, Box Thin Clients and Tablet Thin Clients (mobile)

Function

Pepperl+Fuchs VisuNet Remote Monitors (VisuNet RMs) and Box as well as Tablet Thin Clients are industrial grade thin client solutions that give operators a simplified, modern user interface. VisuNet RM Shell 6 firmware enables users to easily access the applications that run on a process control systems via Ethernet.

With this basic version of the VisuNet RM Shell, all standard features of the software are available. Optional license keys offer extended features.
