

Software

Vision Configurator

- Straightforward operation
- Simple installation

Operating software for camera-based sensors

Technical Data

General specifications

Description Software for all camera-based sensors

System requirements

Hardware requirements PC with 1 GHz processor and at least 1 GByte RAM

Software requirements The .NET Framework 2.0 or higher software must be installed

Operating system Microsoft Windows® 10
Microsoft Windows® 11

Function

Description

Vision Configurator is a software program for operating a sensor from the PC. The connection between sensor and PC allows you to display and modify various sensor parameters via the graphical user interface. Vision Configurator also contains status messages and visualization and evaluation features.
