

Software

eBARCODE-ML

- Barcode Scanner Application
- Extends the keyboard with a dedicated button
- Android™ application
- Available at Google Play
- Scans and enters barcodes directly into any application's input fields

Advanced keyboard with integrated barcode scanner and NFC functionality for ecom mobile devices

Function

Advanced Barcode Scanning Solution

Based on Google's ML Kit (Machine Learning), eBARCODE-ML is a more advanced and convenient barcode scanner. Whereas eBARCODE is solely integrated into the system's keyboard, eBARCODE-ML integrates directly into applications out-of-the-box.

After setup, the app automatically appears as an overlay icon on the screen, providing quick access at any time.

For best user experience, eBARCODE-ML asks user to allow eBARCODE-ML Accessibility Service, which can automatically pass scanned barcodes into a selected input field of an app. eBARCODE-ML Accessibility Service does not monitor, process or collect information of apps in the background.

As an alternative method to pass barcodes into apps, eBARCODE-ML offers option to use traditional clipboard.
